

# EASYFIX

A display unit made of aluminium square-profiled rods (12\*12mm) with sliding fittings, lockable in any position, for rapid adaptation to the surroundings, without using any tools and to the exact size of your poster. Several levels possible. The rods may be linked up in length, allowing heights up to 2,00 - 2,50 m whilst lateral assembling with the help of T corners allows unlimited extension in width. Usable with any kind of poster, even very thin, it makes a double-sided use possible, as do all our other frames.

**Universal structure functioning by spring tension, very stable - maximum display within minimum**

The fittings, adjustable without using any tools, allow simultaneous lateral and height adaptation.

## APPLICATIONS

With Easyfix, there is no limit to combining as many posters as you wish within a complex structure. By simply using the rods and T fittings, you can create a whole kiosk, even a pyramid. The picture-wall system comes as a simple solution – economical and portable for trade fairs, exhibition halls, showrooms, etc.

## THE TECHNIQUE

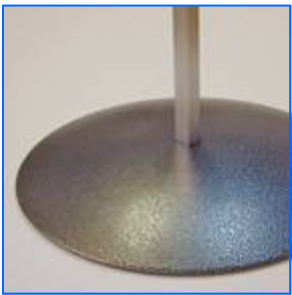

To make up a structure, all you need is pre-cut aluminium rods - our designers will have worked on your project beforehand - and single or double 90° angle T fittings. As for accessories, see our very stable steel round bases, plastic caps, strengthening clips for heavier material, or for the display of 2 posters within one frame, etc.

Holding the documents with our transparent plastic clips

Rods linking up two lengths of frame. This system allows you to take a 2\*4m picture wall in a simple 1 m high cardboard tube on your flight.

Glossed steel round base, Ø 20 cm, weight 1,5 kg
