

RONDOFIX

An aluminium round-profiled poster-holder, sober and elegant in style (diam 10mm), allows to stretch a poster tight by its 4 corners thanks to a system of clips and springs. Rondofix, an avant-garde display frame, entirely dismantlable and extremely light, comes forth as the obvious solution as opposed to competing items (cardboard, print on wood, cast plastic frames...), whilst accepting all types of posters, even very thin. Double-sided use is possible, as for all other items we make.

Universal frames with a system of spring tension, a middle-of-the-range product, more particularly adapted to small to medium sizes

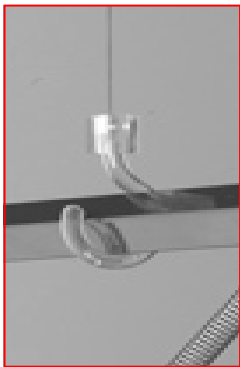

Our smart assembling clips allow any kind of set up - into folding screens, or volumes...

APPLICATIONS

Its lightness makes it possible for all displays : against a wall, hanging down from the ceiling, resting on a counter top, behind a shop window. Several frames can also be connected to one another with the help of fitting clips (mini folding screens, cubes, etc).

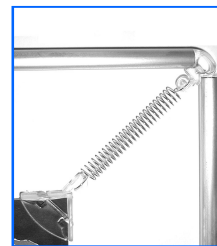

Very resistant suction pads for the ideal window display

Suspension hooks for an aerial double-sided presentation for example

A round plastic base, so as to rest the display on a counter top for example

Holding the documents with our transparent plastic clips

THE TECHNIQUE

Suction pad to be inserted into the rod fittings

Two transparent polycarbonate feet

A robust aluminium rod - anodised silver or glossed, on request and depending on the quantity ordered. 10

Outer dimensions of the frame :
Poster dimension + 10 cm

All dimensions, from 10*15 to 60*80 cm, other colours available on request depending on the quantity ordered
